INTRO

About Me

Solution Architect and full-stack engineering leader with 5+ years delivering enterprise web applications and customer experience platforms in commercial banking. Deep expertise in Node.js and Angular, with a track record of designing scalable platform architectures, leading cross-functional teams, and modernizing legacy systems at pace. Currently the Solution Architect for BMO's Online Banking for Business (OLBB) platform — owning front-end architecture, Node.js API design, and engineering team growth, while also architecting AI-enabled contact centre integrations (Amazon Connect, AWS Bedrock) and ServiceNow-based customer service workflows across a suite of products serving millions of commercial banking customers. Relocating to Calgary, AB.

EDUCATION

University of Waterloo, Waterloo, ON
Bachelor of Science, General Science,
commencement Fall 2018

Durham College, Oshawa, ON
Advanced Diploma, Electromechanical Engineering Technologist,
commencement Fall 2011

EXPERIENCE

BMO Financial Group

BMO Financial Group is the 8th largest bank in North America, serving over 12 million customers across a highly diversified range of financial services.

Solution Architect - [BMO Financial Group](#) Jan 2022 - Present
[\(OLBB\)](#), Toronto, ON

- Own end-to-end architecture and delivery of Angular front-end applications and their Node.js backend APIs across the OLBB commercial banking platform
- Directed the OLBB-wide Angular upgrade programme — the largest front-end modernisation effort across the platform, migrating 30+ applications spanning AngularJS, Angular 4, and Angular 7 all the way to Angular 19; authored the foundational libraries and SDKs that made incremental migration possible, then planned and led the full rollout across every UI surface
- Tech lead on the OLBB *Getting Started Hub* — a learning content delivery platform designed to accelerate new commercial banking customer onboarding

- Led engineering delivery of *Lexicon* — a dual-format Angular and Web Component design system and component library for commercial banking, which earned the **Red Dot Award (2024)** and is now the standard UI layer across the OLBB product suite
- Architected Amazon Connect contact-centre integrations for commercial banking customer support, including a TransUnion caller-verification service to detect call spoofing/fraud and a Contact Lens transcript-analysis pipeline powered by AWS Bedrock (GenAI) for automated call quality and insights
- As dev lead, integrated OLBB applications with ServiceNow customer service workflows, including delivery of a virtual-agent chatbot for commercial banking customer support
- Recruit, mentor, and grow a team of full-stack engineers; established code-review practices, architectural standards, and a culture of continuous improvement
- Collaborate with product owners and senior stakeholders to translate business requirements into scalable technical solutions

WebsiteBox

WebsiteBox is a SaaS platform providing website hosting and WYSIWYG design tools to real estate agents and brokerages.

Node.js Developer - [WebsiteBox](#), Toronto, ON Feb 2021 - Dec 2021

- Built and maintained Angular and AngularJS front-end applications backed by Node.js/Express microservices
- Drove the migration from a legacy billing system to Stripe, delivering reliable, PCI-compliant payment processing
- Worked across a polyglot data layer including Elasticsearch, Apache Cassandra, and MySQL (MariaDB)

FliteX

FliteX is an early-stage startup building a SaaS platform for AI-driven airline route optimization.

Full Stack Developer - [FliteX](#), Oshawa, ON March 2020 - June 2020

- Prototyped a geospatial SPA (Angular) for interactive flight route visualization and optimization
- Ported core algorithmic models from MATLAB to Python (NumPy, SciPy), improving iteration speed and testability

Wysdom AI

Wysdom AI is an AI company offering enterprise virtual assistant and chatbot software via a SaaS platform, primarily serving large telecoms.

AI Automation Specialist - [Wysdom AI](#), Richmond Hill, ON June 2019 - March 2020

- Designed and implemented automated chatbot regression testing in Python, reducing manual QA effort
- Built web-based business process automation tools that improved internal operational workflows
- Contributed to a prototype audio-processing data pipeline using FFmpeg for ML training data preparation

SKILLS

- Node.js / Express
- Angular
- TypeScript / JavaScript
- RESTful API Design
- Microservices
- React
- HTML / CSS
- AWS
- Kubernetes / OpenShift
- CI/CD and IaC
- Web Components
- Agile / Scrum
- Amazon Connect / Contact Lens
- ServiceNow Integrations
- AWS Bedrock / GenAI
- Contact Centre & CX Architecture

CERTIFICATIONS

- AWS Certified Solutions Architect Professional, *SAP-C02*, [Verify](#)
- OpenJS Node.js Services Developer, *JSNSD*, [Verify](#)
- OpenJS Node.js Application Developer, *JSNAD*, [Verify](#)
- AWS Certified Solutions Architect (Associate), *SAA-C02*, [Verify](#)
- AWS Certified Cloud Practitioner, *CLF-C01*, [Verify](#)
- Certified Associate in Python Programming, *PCAP-31-02*, [Verify](#)

PROJECTS

- Secrets-as-Code CLI - ([Demo](#)) — Secrets-as-code CLI tool; built end-to-end using TDD and BDD with AI-assisted development (Claude Code)
- Video Summarizer - ([Demo](#)) - Alpine.js, TailwindCSS for styling, WASM (if available), and OpenAI API

EXTRA-CURRICULARS

- Waterloo - Team Leader Magnetic Wheel. Competed at SpaceX [Hyperloop Pod Competition](#) 2017.

PUBLICATIONS

- [Approaching special relativity in complex time](#), Can. J. Phys., **95**(10) (2017) 923-926., Mathematical/theoretical physics, logic, set theory, and algebra

AWARDS

- [Pascal Mathematics Contest](#), School champion, 25th percentile.
